1. Introduction

Welcome to the User Guide for Encryption/ Decryption and Integrity Monitoring Software—a cutting-edge tool to protect your digital data. In today's connected world, data security is crucial, and our software keeps your information confidential and tamper-proof.

1.2 Purpose of Encryption/ Decryption and Integrity Monitoring.

This is a software which helps to encrypts your valuable information and helps to send to another party without getting tampered. Our software empowers you to:

- **Encryption:** Safeguard your files and messages with strong encryption methods, making them unreadable to unauthorized users.
- **Decryption:** Easily unlock encrypted data, ensuring smooth access to protected information as required.
- **Integrity Monitoring:** Keep an eye on the trustworthiness of your data to spot any unauthorized alterations or tampering, preserving the reliability of your digital assets.

1.3 Who should use this Manual?

- **Novice Users:** If you're new to the world of encryption and data security, this guide will provide you with a straightforward overview of how to effectively utilize Encryption/ Decryption and Integrity Monitoring.
- **Experienced Users:** For those already well-acquainted with encryption, this manual provides insights into advanced capabilities and recommended techniques.
- **IT Professionals:** IT administrators and security experts will discover valuable insights on deploying and overseeing Encryption/ Decryption and Integrity Monitoring. Within an organizational context.

2. System Requirements

For the installation of make sure the computer meets the following minimum requirements,

- Operating system: Window 10, MacOS, Linux
- Processor: Intel Core i5 or AMD Ryzen 7, 2.0 GHz
- RAM: 4 GB for smooth operation
- Hard disk space: 1 GB

3. Installation Instructions

To install the software, please follow the steps below,

Step1 – Extract the zip file.

Step2 – Run the .exe(executable) file.

4. User Overview Interface

The Encryption/ Decryption and Integrity Monitoring software provides and user-friendly interface to make the main features straightforward.

Login Interface

Fig. login interface

In this interface the user has to enter his/her login credentials. A username and the password. This can be preassigned by the It department in the hospital.

Main Interface

Fig. where the user have to select encrypt/ decrypt

This is the main interface, where the user can select the option encryption or decryption. If the user selects encryption a new interface will appear(encryption interface) or if the user selects the decryption a new interface will appear (decryption interface).

Encryption Interface

Fig. encryption

This is the encryption interface where the user can browser the files and encrypt them.

Decryption Interface

Fig decryption

This is the interface where the user can select the encrypted files and decrypt them.

Uploading Interface

Fig upload winscp.

When the user click upload then a new window will open, it will redirected to WinSCP software and there the user can share the encrypted files from one pc to another.

5. Using the Software

Process 1 < Encryption >

Step 1 -Click the “Encrypt” button.

Step 2 -Select browse file to select the files to encrypt.

Step 3 -Select the files to encrypt.

step 4 -Press “Encrypt” button.

Process 2 < Sharing the encrypted files >

Step 1 -Click the “Upload” button.

Step 2 -Select the files shown in the window.

Step 3 -Press upload (in top left corner).

Process 3 < Decrypting the files >

Step 1 -Click download button.

Step 2 -Select the encrypted files and download.

Step 3 -Press decrypt button to decrypt the files.

6. Frequently Asked Questions

Here are some frequently asked questions.

Question 1:

What is the purpose of this software?

The software's purpose is to securely exchange medical data among healthcare professionals. It safeguards patient records' confidentiality, integrity, and authenticity while enabling easy communication between users.

Question 2:

Can I customize user access permissions within the software?

Yes, you can assign roles and permissions to access a specific folder where the encrypted files are sent to.

Question 3:

Can I transfer medical records securely to another healthcare provider?

Yes, you can transfer we have used a SFTP (secure file transfer protocol) software to transfer the files from one user to another.
